ABRAHAN TOLENTINO

Frontend Developer/ Full Stack Developer

917-402-7230 | abrahantolentinov@gmail.com | abrahantolentino.com

Aspiring Full Stack Developer with hands on experience building small scale web applications using modern technologies like JavaScript, React, Python, Flask, and MySQL. Passionate about clean code, responsive design, and continuous learning, with a solid foundation in both frontend and backend development gained through personal and collaborative projects. Eager to contribute to a dynamic development team, grow under mentorship, and deliver impactful software solutions in a full time staff

WORK EXPERIENCE

BigBit Software - Full Stack Developer
01/2025 - Present

- Designed and developed the organization's corporate site, including React frontend, Flask backend, and Sendgrid integration.
- Developed backend deployment pipeline to Digital Ocean droplet using GitHub actions.
- Designed and developed customer TeamTNR (https://www.teamtnr.org) web application, including multi stage customer engagement wizard and administrator dashboard using React, backend API using Flask, database ORM using SQLAlchemy, and MySQL for data persistence.
- Conducted requirements gathering sessions with BaccioCouture (https://bacciocouture.com) for remediation of their Shopify site, including digital assets management, copy development and layout, and performance optimization.

The People's CTO - Full Stack Developer
2025

- Built and deployed The People's CTO web platform to support a fractional CTO consulting brand, focused on converting visitors into qualified leads.
- Developed a responsive React frontend with modern UI patterns, clear service positioning, and optimized page performance across devices.
- Created a Flask backend API to handle contact form submissions, intake requests, and lead capture workflows.
- Integrated SendGrid email automation for real-time inquiry confirmations and internal lead notifications.
- Implemented database persistence in MySQL for tracking submissions, customer details, and service request history.
- Set up CI/CD deployment pipeline using GitHub Actions, improving release reliability and reducing manual deployment effort.
