

ABRAHAN TOLENTINO

Full Stack Developer | Frontend Developer

Bogota, NJ | 917-402-7230 | abrahantolentinov@gmail.com | abrahantolentino.com | GitHub: AbrahanTV

EDUCATION

Bergen Community College

A.S. Computer Science — In Progress

Expected May 2027

Planned transfer to a Bachelor's degree in Computer Science.

- **Vice President of Bergen Open-Source Foundation Developers Club** – Lead club initiatives, coordinate events, and oversee development of the club's technical projects.
- **Relevant Coursework:** Data Structures and Algorithms, Object Oriented Programming, Database Systems, Web Development.

PROFESSIONAL SUMMARY

Full Stack Developer with production experience building React/Flask web applications, RESTful APIs, and database-driven systems. Skilled in CI/CD pipelines, cloud deployment, and AI-assisted development tools (Claude, GitHub Copilot, ChatGPT). Proven ability to collaborate with stakeholders and deliver scalable solutions in agile environments.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, YAML.

Frontend: React.js, TypeScript, HTML, CSS, Bootstrap, Responsive Design.

Backend: Flask, RESTful APIs, SQLAlchemy.

Databases: MySQL, Microsoft SQL Server.

DevOps & Cloud: Git, GitHub, GitHub Actions, CI/CD, DigitalOcean, Vercel.

AI Tools: Claude, GitHub Copilot, ChatGPT — code generation, debugging, documentation.

Tools & Practices: Agile Development, API Integration, Debugging, Version Control, Cross-Browser Compatibility

Design: UI/UX Principles, Adobe Photoshop, Illustrator

PROFESSIONAL EXPERIENCE

BigBit Software | Full Stack Developer

January 2025 – March 2026

- Developed and deployed production-ready corporate websites using React and Flask, reducing client onboarding time by streamlining UI and backend workflows.
- Designed RESTful APIs integrated with SendGrid to automate email notifications, eliminating manual communication steps.
- Architected a MySQL database layer with SQLAlchemy ORM, ensuring data integrity and making backend queries maintainable and scalable as the product grew.
- Automated CI/CD pipelines via GitHub Actions to DigitalOcean, cutting deployment time and reducing human error in release cycles.
- Contributed to the TeamTNR web application, including a multi-step onboarding workflow and administrative dashboard.
- Leveraged AI tools (Claude, Copilot, ChatGPT) to accelerate development, debugging, and code quality.
- Collaborated directly with stakeholders to translate business requirements into scalable technical solutions.

PROJECTS

TeamTNR Adoptions | teamtnr.org

2025

Technologies: React, Flask, Python, MySQL, SQLAlchemy, REST APIs

- Designed a multi-step React form backed by Flask and MySQL, making the adoption application process intuitive and reducing form abandonment for non-profit users.
- Built a Google Auth-protected admin dashboard giving staff real-time visibility into all applications, replacing a manual spreadsheet-based tracking process.
- Configured DigitalOcean deployment with GitHub Actions CI/CD, enabling zero-downtime updates and keeping the live app consistently available for users.

Formula 1 Race Tracker & Calendar | f1-project.com

2025

Technologies: React, JavaScript, F1 API, OpenF1 API, Vercel

- React application displaying live race calendar, driver roster, and constructor standings via F1 and OpenF1 APIs.
- Features real-time race countdown and team-colored UI; deployed on Vercel.

The People's CTO | thepeoplescto.com

Sept 2024 – Dec 2024

Technologies: React, Flask, Python, MySQL, SQLAlchemy, SendGrid API, GitHub Actions

- Built and launched a full-stack consulting platform using React, Flask, and MySQL with a mobile-friendly, responsive frontend.
- Developed backend API endpoints for lead capture, form handling, and data persistence using Flask and SQLAlchemy.
- Integrated SendGrid API for automated email workflows; automated CI/CD deployment via GitHub Actions.
